Developing features and debugging existing codes using .NET and SQL. Uses SCRUM, practices communicates with team about isses and suggestions as well from other modules for efficiency. Can adapt to uncommon languages such as our company framework based on Ext.Js

---

PROJECTS

MOVIE RENTAL APPLICATION

Before my previous company hired me, They measured our skills by giving us task that involves both front-end and back-end development.

- For the Front-end, Understood the concept of MVC with Sencha Ext. JS, connecting to the API in stores, specifying models, and creating functionalities in the controller. Practices the understanding of Header and Detail
- Created CRUD operations, Used Entity Entity Frameworks, performed relationship between tables and connected the server into the database

WEATHER APPLICATION

After working hours, I started investing in expanding my flexibility on other libraries such as React JS

- Created a simple react project. Performed a simple useState. Used an online service called OpenWeatherMap that provides minute by minute precipitation forecast. Can provide an API doc in JSON, XML, and HTML format that I can connect to using Axios.
